

10 Reasons to Choose **CAAPS** for Corporate Action Management

Corporate Actions Announcement Processing System (CAAPS) compares, processes, and communicates corporate action events to improve operational efficiency.

1

Focused Solution

CAAPS concentrates on the corporate action lifecycle; allowing institutions to use a specialist, best in class solution for corporate actions processing. There is no requirement to replace entire books and records which significantly reduces implementation time.

2

Event Data Management

Agnostic to data sources, CAAPS integrates seamlessly with multiple different data vendors, custodian banks, and depositories to provide near real-time data management and controls. Clients choose different sources and migrate to new sources at any time.

3

Enhanced Client Communication

CAAPS enables you to easily communicate Corporate Action information to your client, and in return receive event elections that best suits their needs via ISO messaging, email or Client Portal.

4

Highly Configurable

CAAPS self-service enabled configurations allow you to organize information and create business rules that support your internal business flows and client requirements.

5

Intuitive Interface

CAAPS offer a modern interface that is intuitive and enables operations users to self service with enhanced productivity. The interface can be configured around existing workflow processes to facilitate easy implementation.

6

Client Portal

This enables your clients to access their Corporate Action events, including Notification and Response capabilities. This provides transparency as well as updates.

7

Efficient Integration

CAAPS focuses on straightforward data flows, enabling a simple and smooth integration with your existing data repositories and books & records systems, as well as your clients who support ISO/SWIFT messaging.

8

Flexible Architecture

CAAPS offers a flexible and modular software architecture that can be run as a SaaS based solution, or deployed either on the client's cloud or on premise.

9

Election Management

Clients can consume end-client ISO 15022 messages or Client Portal instructions with monitoring and alerting tools to manage voluntary events.

10

Strong Foundation

CAAPS has been built upon the Corporate Action ISO Data Model, which offers an industry standard solution and simplifies data integration and management. On an ongoing basis, FTS updates the data model annually, as per the ISO standard.
